

**MGE0000010/MGE0000020 - MasterCase****I CARATTERISTICHE TECNICHE**

|   |  |
|---|--|
| alimentazione   | 230 Vac +10/-15% 50/60 Hz  |
| alimentazione valvola elettronica (morselli 24 Vac)               | Trasformatore 24 Vac 20 VA disponibili solo sul cod. MGE0000020  |
| ingressi sonda  | 4 ingressi per sonde NTC   |
| tipo di sonda -   | NTC Std CAREL 10 KQ 25 °C - ± 1 °C   |
| accuracyzza di misura   | -50T90 °C (-58T195 °F) risoluz. 0,1 °C   |
| intervallo di rilevazione   | 5 per contatto pulsato non optoisolati   |
| Ingressi digitali   | contatto aperto-chiuso 8 Vdc - 8 mA tipico   |
| connessione seriale LAN   | a due capi AWG22/24 lung. max. 10 m  |
| uscite relè: tipo di azione disconnessione                        | Azione tipo 1B (microinterrompente) EN60730 100.000 cicli  |
| e Nr. di cici di manovra  | Nota: Hele in scambio solo per N.O. o N.C.   |
| Comp./Valve   | 2 Hp 12(12) A-250 Vac (min. 100.000 cicli) 12 A 10FLA 60LRA UL 250 Vac   |
| Defrost   | 12(4)A-250 Vac (min. 100.000 cicli) - 2500 W -> cosq=1   |
| Fan   | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli) - 500 W -> cosq=0,6  |
| Light   | 2 Hp 12(12) A-250 Vac (min. 100.000 cicli) fluorescent Lamp 1.000 VA-110U (max. 15.000 cicli)  |
| Rail Heat (Aux2)  | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli) - 2500 W -> cosq=1   |
| Aux1  | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli)  |
| Alarm   | contatto SPDT 1 Hp 12(4) A-250 Vac (min. 100.000 cicli)  |
| morselli alimentazione  | morselli a vite 12 A 250 Vac (UL 10A) per alimentazione carichi e controllo  |
| 250 Vac   | sezione minima consigliata: 1,5...2,5 mm <sup>2</sup>  |
| morselli per segnali I/O  | morselli a vite per cavi con sezione da 0,25 a 2,5 mm <sup>2</sup>   |
| connessioni I/O   | lunghezza max. cavi di segnale: - sonde di temperatura (NTC) max. 30 m - ingressi digitali max. 30 m - sonde di pressione (ratimetriche) max. 10 m - uscite motore valvola elettronica max. 10 m |
| morselli LAN  | morselli a vite per cavi con sezione da 0,25 a 2,5 mm <sup>2</sup>   |
| supervisione CAREL  | morselli a vite per cavi con sezione da 0,25 a 2,5 mm <sup>2</sup> solo se presente scheda di supervisione (opzionale)   |
| montaggio   | a parete (retroquadro) mediante barra DIN  |
| terminale/visualizzatore  | connessione seriale a 3 fili lunghezza max. 10 m: • terminale opzionale PST Small o Large • visualizzatore opzionale PST00VR100  |
| classificazione secondo la protezione contro le scosse elettriche | Classe II per incorporamento adeguato trasformatore in doppio isolam. e distanz. relé per isolamento rinfornato  |
| orologio RTC  | gestione giorni, ore, minuti: precisione ±20 ppm (±10 min/anno)  |
| mantenimento delle RTC  | 10 anni con batteria al Litio non ricaricabile sostituibile solo da personale specializzato  |
| condizioni di funzionamento                                       | -10T50 °C - umidità <90% U.R. non condensante  |
| condizioni di immagazzinamento                                    | -20T70 °C - umidità <90% U.R. non condensante  |
| ambiente (tipo inquinamento)                                      | normale  |
| PTI dei materiali di isolamento                                   | 250 V  |
| periodo di selezione delle parti isolanti                         | lungo  |
| categoria di resistenza al calore e al fuoco                      | categoria D (funz. senza sorveglianza)   |
| immunità contro le sovratensioni                                  | categoria 1  |
| classe e struttura del software                                   | Classe A   |
| grado di protezione: torino dalla scheda                          | IP20 (IP40 solo sul frontale bombato)  |

Attention: nei modelli MGE0000020, nel caso di installazione di più unità nello stesso quadro elettrico, non fornire l'alimentazione a 24 Vac con un unico trasformatore comune, bensì dotare di un trasformatore ciascun MasterCase.

**GB TECHNICAL SPECIFICATIONS**

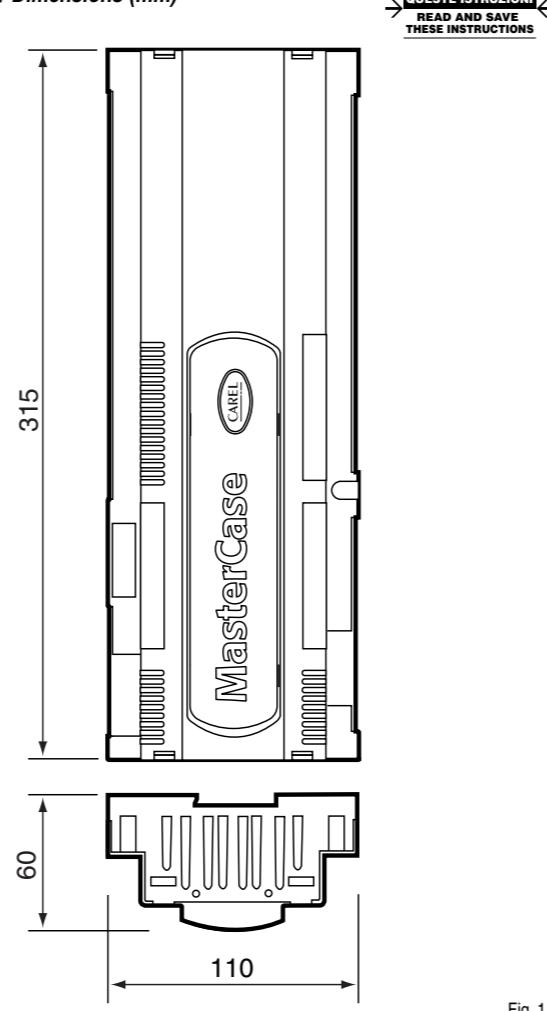

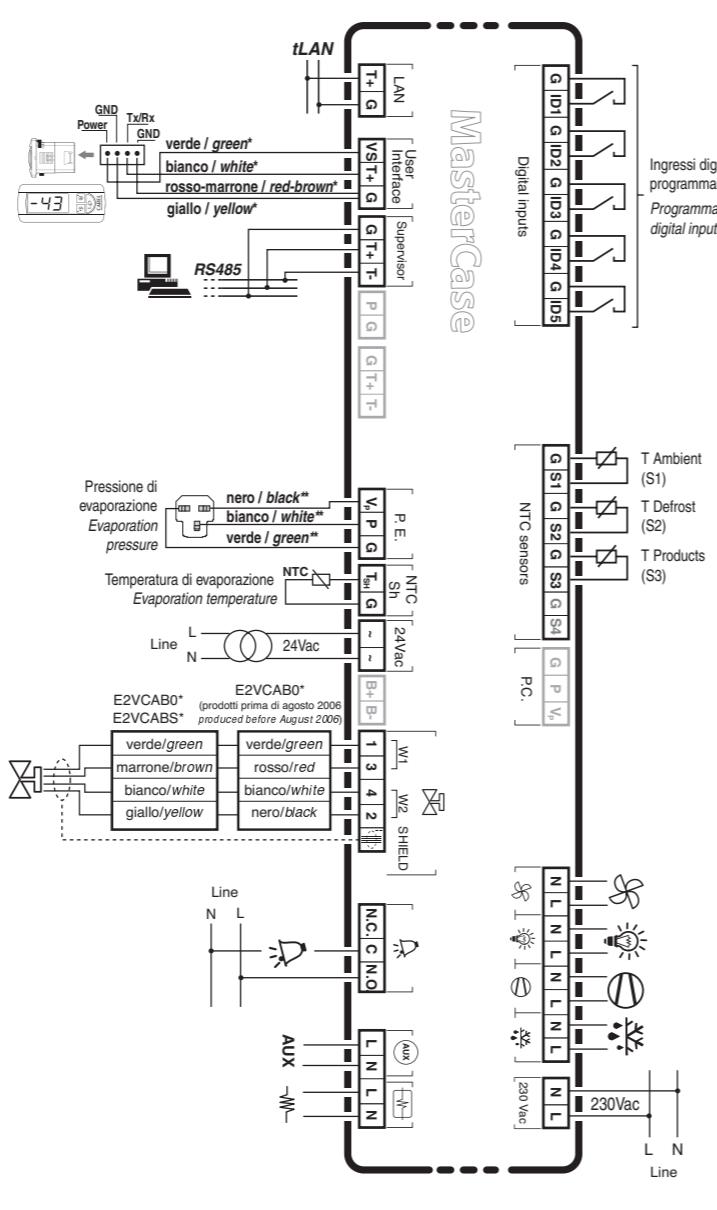

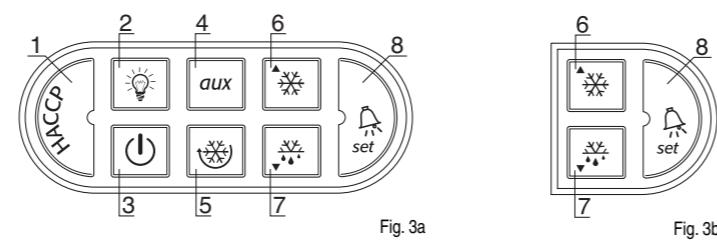

|  |   |
|--|---|
| power supply   | 230 Vac +10/-15% 50/60 Hz   |
| electronic valve power supply (terminals 24 Vac)                   | transformer 24 Vac 20 VA available only on the code MGE0000020  |
| probe inputs   | 4 NTC probe inputs  |
| probe type - accuracy range of measurement                         | NTC Std CAREL 10 KQ 25 °C - ± 1 °C -50T90 (-58T195 °F) risoluz. 0,1 °C  |
| digital inputs   | 5 Volt free contacts, not opto-isolated open/closed contact 8 Vdc - 8 mA typical twisted pair with overall screen AWG22-24 max. length 10 m                                     |
| Relay outputs: action and disconnection type and No. of operations | type 1B action (microswitching) EN60730 100.000 cycles Note: changeover relay only for NO or NC   |
| Comp./Valve  | 2 Hp 12(12) A-250 Vac (min. 100.000 cicli) 12 A 10FLA 60LRA UL 250 Vac  |
| Defrost  | 12(4) A-250 Vac (min. 100.000 cicli) - 2500 W -> cosq=1   |
| Fan  | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli) - 500 W -> cosq=0,6   |
| Light  | 2 Hp 12(12) A-250 Vac (min. 100.000 cicli) fluorescent Lamp 1.000 VA-110U (max. 15.000 cicli)   |
| Rail Heat (Aux2)   | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli) - 2500 W -> cosq=1  |
| Aux1   | 3/4 Hp 12(4) A-250 Vac (min. 100.000 cicli)   |
| Alarm  | SPDT contact, 1 Hp 12(4) A-250 Vac (min. 100.000 cicli)   |
| power supply terminals 250 Vac                                     | screw terminals 12 A 250 Vac (UL 10 A) for load power supply and control  |
| terminals for I/O signals  | screw terminals for cables with section from 0,25 to 2,5 mm <sup>2</sup>  |
| I/O connections  | max. signal cable length: - temperature probes (NTC) max. 30 m - digital inputs max. 30 m - pressure probes (ratimetric) max. 10 m. - electronic valve motor outputs max. 10 m. |
| LAN terminals  | screw terminals for cables with section 0,25 to 2,5 mm <sup>2</sup>   |
| CAREL Supervision  | screw terminals for cables with section 0,25 to 2,5 mm <sup>2</sup> only if the supervisor board is present (optional)  |
| mounting   | wall mounting (back-of-board) by DIN rail   |
| terminal/display   | serial connection with 3 wires of max. length 10 m: • optional terminal PST Small or Large • optional display PST00VR100  |
| classification according to protect against electrical shock       | Class II for appropriate installations  |
| RTC Clock  | management days, hours, min.: accuracy +/-20 ppm (+/-10 min/year)   |
| RTC data holding   | 10 years with non-rechargeable lithium battery it can be replaced only by specialised personnel   |
| operating conditions   | -10T50 °C humidity <90% r.H. not condensing   |
| storage conditions   | -20T70 °C humidity <90% r.H. not condensing   |
| ambient (pollution type)   | normal  |
| PTI of insulating materials  | 250 V   |
| period of electrical stress of the insulating material             | long  |
| catgeg. of resist. to heat and fire                                | category (without supervision)  |
| immunity against voltage surges                                    | Category 1  |
| software class and structure                                       | class A   |
| board protection   | IP20 (IP40 only for the convex front panel)   |

Note: for models MGE0000020, in case a series of units are installed in the same electrical panel, do not supply the 24 Vac power using only one transformer, but use a separate transformer for each MasterCase instead.

Connessioni: la somma della corrente assorbita da tutti i carichi non può superare i 12 A.

Connections: the sum of the current absorbed by all the loads cannot exceed 12 A.

Anschlüsse: die Summe der Stromaufnahme aller Lasten darf nicht über 12 A betragen.

**VI ringraziamo per la scelta fatta, sicuri che sarete soddisfatti del vostro acquisto.****VISUALIZZAZIONE**

Il controllo MasterCase può utilizzare un qualsiasi terminale o visualizzatore della serie PST per segnalare lo stato di funzionamento e permettere le impostazioni dei parametri del controllo. Nel funzionamento normale, in base alla configurazione dei parametri t1, t2, vengono visualizzate le temperature delle sonde presenti.

Attenzione: il visualizzatore remoto (cod. PST00VR100) può funzionare solo se è presente anche un terminale (cod. PST00SR300 o PST00LR200).

**ALLARMI E SEGNALAZIONI**

Gli strumenti della serie MasterCase sono in grado di rilevare automaticamente i principali malfunzionamenti, segnalati nei modi seguenti:

- Sul display con un opportuno codice di allarme.
- In particolare lo strumento visualizza alternativamente il codice di allarme e la temperatura letta dalla sonda. Nel caso di più allarmi contemporanei, essi vengono visualizzati in successione, alternati alla temperatura.
- Per alcuni allarmi viene attivato, se presente, il buzzer interno.

Premendo il tasto si tace il buzzer e si disattiva il relè allarme, mentre il codice di allarme scompare solo quando rientra la causa che lo ha generato.

I codici di allarme previsti sono riportati nella tabella sottostante:

| CODICE | BUZZER E DESCRIZIONE | MODELLI in cui è previsto |
| --- | --- | --- |

<tbl\_r cells="3" ix="3" max

**DISPLAY**

MasterCase can use any terminal or display of the PST series to signal the operating status of the control parameters. In normal operating conditions, in accordance with the configuration of the parameters  $t_1$ ,  $t_2$ , the temperatures of the present probes are displayed.

**Warning:** The remote display (code PST00VR100) only works if a terminal is also connected (code PST00SR300 or PST00LR200).

**ALARMS AND SIGNALS**

The MasterCase series instruments can automatically detect the main malfunctions that are signalled like the following:

- the display of the corresponding alarm code.

In particular, the instrument alternately displays the alarm code and the temperature read by the probe.

In case of more contemporary alarms, these are displayed in succession, alternating with the temperature.

• for some alarms the internal buzzer, if present and the alarm relay are activated.

Pressing the button silences the buzzer and de-energises the alarm relay, while the alarm code disappears only when the causes of the alarm are no longer present.

The alarm codes are shown in the table below:

| CODE         | BUZZER and AUX relay | DESCRIPTION                                     | MODELS featured |
|--------------|----------------------|---|-----------------|
| E1           | active               | control probe error                             | ALL             |
| E1           | not active           | room probe error (S1)                           | ALL             |

**OPERATION INDICATION ON THE KEYPAD AND BUTTON COMMANDS**

On terminal PST Large (see fig. 3a):

1 HACCP signal and reset (red LED); button pressed for 5 seconds.

2 LIGHT signal and activation (yellow LED); button pressed for 1 second.

3 ONEWF signal and activation (green LED); button pressed for 5 seconds.

4 AUX signal and activation (yellow LED); button pressed for 1 second.

5 CONTINUOUS-CYCLE signal and activation (green LED); button pressed for 5 seconds.

6 Compressor On signal (green LED); LIGHT activation, button pressed for 1 second.

7 DEFROST signal and activation (yellow LED); button pressed for 5 seconds.

8 BUZZER signal and silencing and relay ALARM (red LED).

6+ 7 CONTINUOUS-CYCLE; button pressed for 5 seconds.

The blinking status means that the corresponding function is delayed by a timed routine.

The buttons 6, 7, 8 are used for the display and parameter set functions.

On the PST Small terminal (see fig. 3b):

1 HACCP signal and reset (red LED); button pressed for 5 seconds.

2 LIGHT signal and activation (yellow LED); button pressed for 1 second.

3 ONEWF signal and activation (green LED); button pressed for 5 seconds.

4 AUX signal and activation (yellow LED); button pressed for 1 second.

5 CONTINUOUS-CYCLE signal and activation (green LED); button pressed for 5 seconds.

6 Compressor On signal (green LED); LIGHT activation, button pressed for 1 second.

7 DEFROST signal and activation (yellow LED); button pressed for 5 seconds.

8 ALARM signal and silencing (red LED).

6+ 7 CONTINUOUS-CYCLE; button pressed for 5 seconds.

MANUAL DEFROST

Besides the automatic defrost, it is possible to activate a manual defrost, (if the corresponding activation conditions exist), pressing for 5 seconds.

**ON/OFF BUTTON**

Pressing for 5 seconds, it is possible to activate/deactivate the controller.

When the controller is deactivated is in a standby condition, and all the outputs and inputs are inactive.

**HACCP FUNCTION**

This controller complies with the HACCP Laws in force, since it allows the continuous monitoring of the temperature, signalling if any of the maximum thresholds are exceeded for a set time (alarm with code HA) and recording the day - hour - min of the event.

This function works even without power supply. In this case, this alarm is set using the parameters AH, Ad and tr (Ad-tr = HACCP activation alarm delay), signalling the code HF when power supply returns.

**PROGRAMMING WITH THE HARDWARE KEY**

If the hardware key (Code PSOPZKEY00) is used to program the instrument, the operation must be performed only with the MasterCase not powered (230 Vac terminals disconnected) and, for models MGE0000020, with the driver board for electronic valves powered (24 Vac terminals).

**SET POINT (operating temperature)**

1) pressing the SET button for one second, the set point value appears flashing;

2) use the UP or DOWN buttons to increase or decrease the value;

3) pressing the button again confirms the new value.

**ACCESS AND MODIFICATION OF THE FREQUENT PARAMETERS (F type and C type)**

1) pressing for 5 seconds PP is displayed (in case of alarm, first silence the buzzer);

2) press and then or until 22 is displayed (PASSWORD); press to confirm (only for type C parameters);

3) using or scroll through the parameters up to reaching the one whose value has to be modified;

4) press SET to display the associated value;

5) use or to modify its value;

6) press to temporarily confirm the new value, then display its code.

**Storage of the new values:** after having set the values for each parameter press at least 5 seconds and exit the "PARAMETERS MODIFICATION" procedure. Do not switch off the controller, at least for 20 seconds for the real storage. For timing parameters only: switch off and switch on the controller in order to make them immediately effective (without waiting for the following cycle).

To exit without modifying the parameters: do not press any button for at least 30 seconds (TIME-OUT OUTPUT).

**LIST OF PARAMETERS**

| Parameter  | Type          | Min   | Max  | U.M. | Def | LAN |
|--|---------------|-------|------|------|-----|-----|
| PP PARAMETERS PASSWORD   | F             | 00    | 199  | -    | 22  |     |
| PS LOG-PASSWORD  | F             | 00    | 199  | -    | 44  |     |
| Pd DOWNLOAD-PASSWORD   | F             | 00    | 199  | -    | 66  |     |
| / PROBE PARAMETERS   |               |       |      |      |     |     |
| /2 probe measurement stability   | C             | 1     | 15   | -    | 1   |     |
| /4 virtual probe (average between probe 1 and probe 3)                                     | (0-S1, 100-0) | C     | 0    | 100  | -   | 0   |
